Photographs of complete vessels used for comparative purposes have been given identifiable letters beginning with 'A'.

Denholm published a number of examples of Delftfield tin glazed earthenware kiln furniture (1982, 50-1). All very similar to the examples illustrated below.

(FD 2008.1. 253)

Context	Shards	Form	Height	Rim Dia	+	Base Dia	Illus
1051	25	Saggars	236mm	280mm	+	280mm	253 a, b & c

Twenty five shards of which three 2s conjoin from a number of what would seem to be saggars with rows of typical triangular peg holes 20-22mm but without bases, and all in a white firing clay. What evidence we have suggests that the open ended saggars were made by extruding the clay to a thickness of c. 15mm then cut into section and luted together by being cut on the angle (253 c). The peg holes in vertical rows of 4 were almost certainly made with a punch with a round handle or stop whose impression can be seen on the exterior saggars (253 b)

(FD 2008.1. 254)

Context	Shards	Form	Height	Rim Dia	+	Base Dia	Illus
1000	1	Saggar		510mm	+		254

One shard from a 20-25mm thick extruded saggar in a very red coarse fabric tempered with grog large grit and all sorts of rubbish. It has two vertical rows of triangular peg holes 15-2-mm and with evidence of a round punch as in the examples above.

(FD 2008.1. 255)

Context	Shards	Form	Height	Length	Illus
1000/1	11	Pegs	11-15mm	49-64mm	255

Eleven what looks like slip cast pegs all in a white fabric except one (top right), which looks like an over fired waster.

Denholm published a number of Delftfield H Bars similar to the examples illustrated (1982, p 51 Fig 5, A 4).

(FD 2008.1. 256)

Context	Shards	Form	Height	Length + Breadth	Illus
1000/1	4	H - Bars	138mm	207mm + 45mm	256 a & b

Four white earthenware shards from what Peter Denholm described as girders or H-section supports (1982, 50-1 fig 5 illus A4). One of the shards has a few small spots of tin glaze on its

inner flange as if they had dripped down between a gap? The surfaces are in the main covered with fine sand
